## Experience

---

### Kinectro

[May 2018- present][Team Lead]

Serving as a team lead in a Kinectro. I **have** a core responsibilities to manage web and mobile applications of web portal. Application have two ends. Booking system and website. Web application developed by using Laravel 5.8, MySQL, angular js, JQuery and bootstrap. The web application also have mobile solution which is developed in hybrid react native technologies.

Applications

- Applications have multiple user roles. A multiple store own open there account and provide services to their customers. Customer can see multiple service provider and can book there services online. The customer move to their store to use their services.
- User can seek jobs for different service provider store. Service provider can sales it business, give deals according to their services and show market ads at market place.
- Technologies include zoho mail, Facebook chat module, and Laravel echo server for live notification and Stripe for payment gateway
- Application have Dynamic subscription plans for different account plus have one time cost purchasing by using third party stripe module.

### Technoglobin

[October 2016- May 2018][Software Engineer]

Serving as a software engineer in a **Technoglobin** having a core responsibilities to manage different industry verticals e.g. Education, sale tracking, E-Commerce and Web Services. I also worked here as a Team Leader and handled clients successfully. Below are some of areas I worked on.

## Applications

- Sale tracker. Is a business portal where different companies can track their sale person's daily activities there orders and products in an inventory? In sale tracker we have three different kind of user roles (Owner, manager and sale person). Manager can add sale person goal and many other activities for its sale persons. Sale person can also add there schedule meeting with clients and add there sales activates and orders.
- Student quiz system. Teacher create quiz for the students and create different question of quizzes by using quiz templates. Student will take the quiz the system check the answer and provide result of the course quiz.
- Amazon merchant application. By using that application amazon store owner can start campaign to his buyer, inform them about its new products.
- Product Price comparison application. By using that application an amazon and eBay store owner compare its products price with different store products and make it price lesser then that product to increase its sales.

## 3S Solutions

[July 2014- October 2016][Software Engineer]

Serving as a software engineer in a **3S Solution** having core responsibilities to manage different industry verticals e.g. Education, Real Estate, E-Commerce and Web Services. Below are some of areas I worked on,

Business portal application

- Business portal that keeps track of different sub organizations and manages there data according as business demands
- Teacher portal that manages teacher accounts (with multiple rights) and there lectures. Users can comment on these (video lectures) on second bases
- Landlord and Tenant Portal where landlord post place related information and interested tenants can check rented places
- Question and Answer website in which users can create courses and there related quiz for the users. User can answer the quiz. System will match the answers and give the result
- E-Commerce website in WordPress using Woocommerce plugins and sancha. Create many custom theme according to client requirement

- Explored and integrated multiple third party APIs used by ios and Android platforms

## Targeted media

### [December 2012-July 2014][Software Engineer]

I Worked there as a part of team working on an **Online Social Media Backup Application**. The core logic behind this Application was to sync the data of multiple **Social Media** websites like **Facebook, Flickr, Twitter, Tumbler, Foursquare, Gmail, LinkedIn** and **Evernote** for Register Users using provided **Restful and SOAP based APIs** and store it at **Amazon s3 Cloud Storage**.

## Chrome Brains

### [July 2011-December 2012][Software Engineer]

I worked on and developed many E Commerce and blog websites in php Core using Ajax, JQuery, html/css and MySQL.

I Customized the **Open Cart** (MVC based Open source shopping cart solution), Installed many **Themes and Modules** in **Joomla 2.5 (CMS)** and Developed medium scale websites in **ASP .NET, C#, JQuery, Ajax** and **SQL Server 2008**.
